

Tailor's Bunion ... Keeping Up with Big Brother

A tailor's bunion, or bunionette, is a prominence of the fifth metatarsal bone (the long bone that runs along the top outside of the foot) where it connects to the base of the little toe. The fifth metatarsal begins to protrude outward; the little toe begins to point inward. The subsequent bump is prone to irritation, pain, redness, and swelling and can significantly impact one's quality of life. Occasionally, a bone spur (a bony outgrowth) on the outside of the metatarsal bone causes similar issues.

Tailor's bunions have been identified as such for centuries. Early on, tailors spent long hours sewing while sitting on the ground cross-legged, the outside edges of their feet rubbing along the ground. The resultant friction and pressure greased the skids for little-toe bunions.

Tailor's bunions are not as common as regular old bunions. One study of over 2,200 subjects with foot disorders found that nearly ten times as many had regular bunions than tailor's bunions. Some people are blessed to have a regular bunion and tailor's bunions on the same foot!

Prime instigators of tailor's bunions include inherited foot bone structure that's abnormal, loose ligaments, wearing shoes that don't fit correctly or are otherwise terrible for foot health when worn too much (e.g., high heels), and tight calf muscles.

If you suffer from discomfort in the little-toe area, contact our office. A tailor's bunion is a fairly simple diagnosis because the bony protrusion is so visually apparent. Conservative treatment measures are abundant — e.g., shoe modification, padding, oral medications, icing, orthotic devices (over-the-counter or custom), and corticosteroid injections. Surgery looms if conservative options fail.

Meet Dr. Jonathan Williamson

Dr. Jonathan Williamson is from Albuquerque, New Mexico. He graduated from Manzano High School in 1995, and after two years of missionary service in northern Brazil, Dr. Williamson returned to the land of enchantment where he studied

both Biology and Brazilian Portuguese at The University of New Mexico.

In 2003, Dr. Williamson was accepted to The College of Podiatric Medicine and Surgery at Des Moines University. After receiving his Doctor of Podiatric Medicine, Dr. Williamson completed a three-year surgical residency at Detroit Medical Center – Wayne State University in Detroit, Michigan.

Dr. Williamson is Board Certified in both Foot Surgery and Reconstructive Rearfoot/Ankle Surgery by the American Board of Podiatric Surgery and is a fellow of the American College of Foot and Ankle Surgeons. He enjoys spending time with his wife and four children, playing sports and other outdoor activities, as well as just spending time as a family.

‘Pain and Expletives: The Stubbed Toe Story’

While going barefoot, stocking-footed, or donning open-toed footwear, we’ve all stubbed a toe. The pain is jolting because the toes are teeming with nerve receptors (more so than many other parts of the body) that relay messages about pressure, vibration, texture, temperature, pain, and body position to the brain. Hopping on one leg, desperate foot rubbing, and choice words often follow. Most times, the pain quickly dissipates.

However, if you stub your toe and the discomfort is not temporary, a number of things could be going on. For instance, swelling, bruising, and intense pain when applying weight to the toe might indicate a broken bone. (Bruising can occur apart from a broken bone and sometimes takes a day or two to appear.)

Ligament tears are possible, too. Ligaments in the toes aren’t as sturdy as elsewhere and tear more easily. The object responsible for the stubbing might splay two toes.

If a toenail bears the brunt of the impact, the nailbed might get damaged and bleed under the nail (subungual hematoma). Nails are home to lots of bacteria, so any damage there raises the risk of infection.

Lacerations can result from a stub, too. If a wound continues to leak blood after being tended to, a medical professional should have a look. Stitches and disinfection may be necessary.

If pain recedes quickly after stubbing your toe, there is no deformity or swelling, and your nail displays no obvious changes, you’re good to go. Otherwise, rest, ice, and elevate the toe. If improvement stalls, give our office a call. If you have severe pain, diabetes, or circulatory issues, call us right away.

Mark Your Calendars

- Feb. 2** Groundhog Day: Groundhogs are also known as woodchucks and whistle-pigs.
- Feb. 9** National Pizza Day: Lombardi’s of New York City is recognized as the first U.S. pizzeria (1905).
- Feb. 12** Super Bowl: Fans of Detroit, Cleveland, Jacksonville, and Houston are still pining for a Super Bowl appearance.
- Feb. 14** Frederick Douglass Day: Douglass was the first African American to receive a vote for president at a major political party convention (1888, Republican Convention).
- Feb. 14** Valentine’s Day: Americans spend over \$750 million on Valentine’s gifts for their pets.
- Feb. 20** Presidents’ Day: George Washington is recognized as America’s first mule breeder.
- Feb. 22** Ash Wednesday: The ashes are traditionally derived from the previous year’s Palm Sunday branches.

Urine and Sweat: The Keys to Romance?

Pheromones are chemical substances secreted by animals in fluids such as sweat, urine, and breast milk. The chemicals involved send signals to others of the same species, triggering a response such as a hormonal change or specific behavior.

Scientific research has identified four general types of pheromones in animals. Some alter mood and emotions (modulator pheromones). Others influence reproductive and developmental systems (primer). Some are “signaler” pheromones (e.g., overall health, recent diet, hierarchy) — “This is my turf. I am big and strong. Go away if you know what’s good for you.” Other pheromones are involved in attraction to a potential mate (releaser).

Perfume, cologne, soap, shower gel, body lotion, and deodorant manufacturers pounce on that last element. They make claims that with one spritz, application, or shower, their pheromone-imbued products will enhance sexual attraction. There’s just one problem: Scientists don’t even know if human pheromones exist. And if they do, humans might not have the means to detect them.

Nonhuman mammals, amphibians, and reptiles have an active vomeronasal organ, tissue that detects pheromones. Humans have one too, but it’s currently thought to be nonfunctional. The sense of smell is a key component of pheromone detection, but over the span of human evolution, humans’ reliance on that sense has dwindled, possibly eliminating or greatly diminishing the role of pheromones.

Scientists haven’t ruled out pheromones or pheromone detection in humans; interesting research is ongoing. Although marketing claims on pheromones are bogus, the body-care products themselves might still be wise for social occasions. Or, bypass a shower, show up in sweaty clothes, and see how that works out.

Linguine with Shrimp Scampi

Yield: 3 servings; Prep time: 10 min.; Cook time: 15 min.;
Total time: 25 min.

This recipe, courtesy of Ina Garten (Barefoot Contessa Family Style) and www.foodnetwork.com, is simple, tasty, and comforting. Perfect for Valentine’s Day!

Ingredients

- Vegetable oil
- 1 tablespoon kosher salt (step 1 of directions) plus 1½ teaspoons (step 2)
- ¾ lb. linguine
- 3 tablespoons unsalted butter
- 2½ tablespoons good olive oil
- 1½ tablespoons minced garlic (4 cloves)
- 1 lb. large shrimp (about 16 shrimp), peeled and deveined
- ¼ teaspoon freshly ground black pepper
- ⅓ cup chopped fresh parsley leaves
- ½ lemon, zest grated
- ¼ cup freshly squeezed lemon juice (2 lemons)
- ¼ lemon, thinly sliced in half-rounds
- ⅛ teaspoon hot red pepper flakes

Directions

1. Drizzle some oil in a large pot of boiling salted water, add 1 tablespoon of salt and the linguine, and cook for 7 to 10 minutes, or according to the directions on the package.
2. Meanwhile, in another large (12-inch), heavy-bottomed pan, melt the butter and the olive oil over medium-low heat. Add the garlic. Sauté for 1 minute. Be careful, the garlic burns easily! Add the shrimp, 1½ teaspoons of salt, and the pepper, and sauté until the shrimp have just turned pink, about 5 minutes, stirring often. Remove from the heat, add the parsley, lemon zest, lemon juice, lemon slices, and red pepper flakes. Toss to combine.
3. When the pasta is done, drain the cooked linguine and then put it back in the pot. Immediately add the shrimp and sauce, toss well, and serve.

Takin' It Outdoors ... Healthfully

Spring is just around the corner. Many who shifted their exercise routines indoors to beat the winter chill will soon be heading outdoors again. But consider the following to keep your feet and ankles healthy.

Despite the indoor workouts, our overall activity levels are typically lower during the winter. Many people overrate their fitness level when they return to outdoor workouts. Whether it's running, hiking, bicycling, etc., many go too hard out of the gate, their bodies can't keep up, and injuries occur.

Try transitioning to the outdoors gradually. If you've been doing three miles on the treadmill over the winter, try a two-mile outdoor run to start. If you had been doing four treadmill workouts per week, do three treadmill and one outdoor the first week, two and two the second week, and so on.

Spring still has chilly days, and properly warming up outdoors sometimes gets short shrift, which can cause problems — cold temperatures can pressure people to get moving ... before they're ready. However, stretching before exercise should not be intense — gentle and easy. A brisk walk before a run or bike-riding venture can get the juices flowing. Save the more intense stretching for the post-workout cool-down.

Many studies indicate that exercise injuries peak in the spring. One from 2018 found that Achilles tendon ruptures spiked in the spring and were at their lowest in the fall. Stress fractures shoot up in the spring, too.

If you hit a few bumps in the road with the shift to outdoor workouts, contact our office to schedule a thorough evaluation, proper diagnosis, and effective treatment.
